

SUMMARY

Shelter is something that all people in this world must have because we as humans need shelter, shelter and a place that can give us comfort when we are having a tiring day. Indonesia is a large country, of course, has a population that is not small, of course, housing is increasing and is urgently needed by all people, but limited land that is suitable for society and finance is a problem for some of the population. Occupancy has developed over time so that there are many options that we can choose to build and live in, such as subsidized housing for those who have upper middle income and clusters intended for upper middle income people, all of this can be adjusted to their individual needs. Each community itself is in accordance with the economy it has. But all of this cannot happen if the architect is not directly involved, the architect must and can build housing that is comfortable, safe and according to the needs of the community. Writing this practical work report discusses the planning and design of the Green Center Park townhouse residential building owned by PT. Bangun Cipta Anugrah Abadi, which includes floor plans, views, sections, water networks, air conditioners, trash, buildings and detailed details of the housing being built.

Keyword: Shelter, cluster, townhouse.
