

ABSTRACT

Students monitoring website at I-Smart Education Center Palembang will help the performance of institutions to save time and are expected to reduce the use of paper so there won't be any wasted documents. By using monitoring student monitoring website is expected to help coordinate the each task section in the establishments. In order for the manual processes can be replaced with computerized processes simplify communication between parents with teachers that parents are easy to watch over the development of their children at the education center.

Based on data observation with the I-Smart Education Center Palembang obtained information that a system that is running right now are still manual. Therefore the website that is created by the author is the result of development of the previous system which has existed in the I-Smart Education Center Palembang. With the support of human resources, the process of the operation of the system will be easier. And facilitate students to learn back at home, parents can also see what has already been learned students.
