

ABSTRACT

RS Karya Asih is one branch of RS RK Charitas Palembang located in kenten. Technological advances make RS Karya Asih must have a website to facilitate the delivery of information and can be easily accessed. To get the information is still manual because it still asks and must come to RS Karya Asih in order to get the correct information. Then made an information system website for RS Karya Asih. In the development of this website uses the development of waterfall methodology, as well as web-based programming languages, php, and MySql. The implementation of RS Asih website is expected to help the public in finding information and can help the RS Karya Asih in developing and improving service at RS Karya Asih.
