ABSTRACT

Business processes within a company must have transactions, both sales transactions, purchases, and services. In the transaction involves goods or services traded. Similarly, what happened at PT. Trimba Engineering engaged in BTS maintenance and spare parts sales. In Bengkel PT. Trimba Engineering, NOC is responsible for taking care of the data of field team work and data archives. The NOC will check the field team's work, archive data, and create financial reports. In the processing of work, NOC will input every job data conducted field team. But in the input work often occurs error input data. To overcome these problems is done designing system peginputan data field team work in PT. Trimba Engineering in the future can be implemented in order to facilitate NOC to prepare monthly and daily reports.

Keywords: Application Design Data Input Work Team Field, PT. Trimba Engineering, NOC, data archive.
