Art is a part of human life, its development is inseparable from the human talent and creativity. Moreover, not only it's functioned to facilitate creativity and culture, but also as entertainment. There are various forms of art, but the most common are the art of music, dance, and opera. The existence of art can't be denied as it's been there for hundreds of years ago and is still evolving.

Along with its development, Indonesia has created a lot of diversity in arts and talented artists who have carved a name both in Indonesia and internationally. Singers or artists need a boost in developing their talents. To produce good quality performances, it's required a good medium as well. On the other hand, with the development of the city, the stress level increases, the human need for entertainment is also increased. With a growing of entertainment needs then the need for entertainment facilities is growing as well, and one of many ways to facilitate those needs is through a show of arts performances. There are many performances that take place in the city of Palembang, both traditional arts performances and concerts, but there are still no buildings that meet the standards of acoustic performances that can accommodate both the art of music, dance or opera.

By designing Expressionist Opera House in Demang Lebar Daun, it is expected to facilitate the entertainment needs of the community and the artists who need a place to perform both local and international art. The design will be focused on the presentation of the performance space and facilities and their supporting facility such as theaters and concert halls that will be designed according to the standard acoustic with "Beauty in Motion" theme.

Keywords: *arts, concert, dance, drama, music, performance, opera, opera house, theater*
