

ABSTRACT

Bus Body Building Industry is a complex of buildings (architecture) serving services of a bus body assembly frame / chassis into a framework that is covered by a plate / body so that it becomes the functional unity. In addition, the Building Industry autobody repair services serving Bis / mechanics for vehicle bus and private cars damaged mild to severe. Bus Body Building Industry which will be designed in Palembang aims to design a Bus Body Building Industry in Palembang with the concept of Postmodern Architecture and Eco-Friendly. With assembly facility that suits your needs and in accordance with applicable standards, in order to accommodate the vehicle assembly industry in an architecture that is functional, aesthetic and sturdy. Bus Body Building Industry in Palembang, located on Jalan Soekarno Hatta is an inter-city inter-province roads traversed by various types of vehicles, including buses. The street layout is very strategic, because as the main connecting road between the province, the region has some of the Soekarno Hatta / mess branch autobus company serving overland travel services for the wider community.

Keywords: Architecture, Postmodern, Industrial, Autobody, Eco-Friendly.
