

## **ABSTRACT**

### ***STUDENT'S MONITORING INFORMATION SISTEM PALEMBANG'S I-SMART COURSE (Case Study: Kreatif Cerdas Mandiri Inc.)***

*This research will be based on problem that are caused by the students who often truant and hide or dispose their leaning report. These things can hamper the development of student learning because the important information is not delivered to parents/carers about their child development progress at school. To help supervise students during hours, tutoring, especially as a parent/guardian of the student. This system will provide the parent/guardian's role as the most influential towards students to oversee activities such as the student attendance and grades obtained by the students. The system can help fix these things to become a container of surveillance against the student. One advantage of this system is that it can be accessed online via the gadgets such as smartphones or tablet that runs android-based operating system. As the conclusion this system is created to help administration in managing data on students, teachers on checking student's attendance and helping the student to do exercise anywhere. And with the presence of this system, the parents/guardians of students obtain information about their children' attendance and report card every day.*
