

ABSTRACT

Nowadays technology has become a daily human need. Unlimited, from children, adolescents, even parents often use it. Technology that continues to advance and develop makes people always try to find the latest technologies. Technological development is indeed very necessary. Every innovation is created to provide positive benefits for human life. Providing a lot of convenience, and as a new way of doing human activities, is no exception in places of worship such. The church also needs technology, which is more precisely used by its church administrators. In this practical work, I designed an application to get out and enter the church fund, which was later used for the purposes of the church secretariat. The results of this study are the application design out of church funds that uses the waterfall method that uses MySql as a database. Then the purpose of making this application design is to make it easier for church.
