

ABSTRACT

The Office of Notary public and PPAT is the Office that sought from antiquity until today. The Office of notary public and PPAT sought and needed because it can help the community to undertake the manufacture of deed of land, establishment of companies and many other things related to the issue of land. For example, the Office of Notary public and PPAT Devi Yanti, SH, M. HUM., M.Kn. at the Notary office and PPAT Devi found problems that data to manage deed written manually is often lost and to filling payment results often do not report balance by deed made. Thus a single application management of deed and payment reports have one unit so it doesn't error occurs at the time of the making of the deed and its report because of the direct input results stored in the database. Based on the above problems can be solved by using information technology. Application management deed and payment reports on the Office of a notary and PPAT Devi Yanti, SH, M. HUM., M.Kn., built using waterfall, analysis of the problems of using PIECES, made with the programming language PHP (Hypertext Preprocessor) and HTML, links to websites with databases using VertrigoServ. The application is built for easy user management process in the conduct of his deed and financial statements.
