Background: *Alcohol is a major problem in the world today because it can cause physical, emotional, and even death disorders. Alcohol drinkers not only come from adults, but most of the 14-16 year olds are 47.7% (in 2016).*

Aim : *This study aims to analyze the relationship between parenting by consuming alcohol in adolescents in Palembang Senior high schools.*

Method : *This research uses analytical survey method with cross sectional design. With Cluster random sampling with a population of 343 respondents and a sample of 185 respondents with regard to inclusion and exclusion criteria. Data analysis using Kendall Tau statistical test.*

Result : *Parenting patterns in Palembang Senior high schools are dominantly democratic with a total of 81 respondents (43.8%) from 185 respondents, alcohol consumption in dominant adolescents never consumed alcohol as much as 110 respondents (59.5%). Kendall Tau test found that there was a significant relationship between democratic parenting with alcohol consumption in adolescents in Palembang Vocational High School with a value of $p = 0.034$, there was no relationship between authoritarian parenting by consuming alcohol in adolescents in Palembang Senior high school ($p = 0.733$) there was a significant relationship between permissive parenting by consuming alcohol in adolescents in Palembang Senior high school ($p = 0.001$) there was no relationship between situational parenting with alcohol consumption in adolescents in Palembang Senior high schools ($p = 0.188$). For this reason, the role of nurses is needed as educators to conduct counseling in collaboration with the puskesmas regarding the impact of alcohol.*

Keywords: Alcohol, parenting, and teenagers
