**Background:** Caring is the foundation of professional nursing practice, caring based on caring is able to improve the quality of health services, its application is integrated with biophysical knowledge and knowledge of human behavior can improve individual health and facilitate the provision of services to patients. Intensive Care Unit (ICU) is a special hospital unit with special staff and caring process through SISTEREST chairman's values of Spirituality, Integrity, Stewardship, Trust, Excellence, Respect, Empathy, System. Caring Nurse in ICU is very needed considering the high level of dependency of patient reach 95 - 99%. **Purpose:** This study aims to determine the description of caring nurses ICU RS.RK Charitas Palembang

**Method:** This study used descriptive survey method with total sample of 40 respondents of ICU nurses. Data collection was conducted using Swanson questionnaire through 5 caring process namely maintaining belief, knowing, being with, doing for and enabling.

**Results:** The results of this study were 22 respondents (55%,) assessed caring for ICU nurses, 17 respondents (42.5%) assessed caring for ICU nurses enough and 1 respondent (2.5%) assessed caring for less ICU nurses. To improve caring then can conduct periodic supervision for caring and masukan implementation as the standard of nursing work appraisal, because caring is one of core of nursing.
