

## ABSTRACT

Th. Hartati 1533087

Relationship between the Use of Modification of Nursing Care Method and Nurses Satisfaction at Inpatient Installation RK Charitas Hospital Palembang.

### SKRIPSI

**PROGRAM STUDI ILMU KEPERAWATAN  
FAKULTAS ILMU KESEHATAN  
UNIVERSITAS KATOLIK MUSI CHARITAS**

Keywords: Modification nursing care methods, nurse's satisfaction (xviii, 136 pages, 48 tables, 5 charts, 11 attachments)

**Background:** Nursing is a professional service as a part of health care professionals. The method of professional care is effectively implemented and the effectiveness of the satisfaction of the nurse, but the implementation of it is completed with the patient's condition needs. MPKP is a system that enables professional caregivers to manage professional care professionals independently. Satisfaction is a balance between the expectations and reality.

**Purpose:** This reseach aims to understand the relationship between Modification of Nursing Care Method with Nurses Satisfaction at Installation Rehabilitation Rooms in RK Charitas Hospital Palembang.

**Methodology:** This is a quantitative research using analytic correlation survey, Method of Analysis of Level of Importance-Performance Analysis design by collecting 51 respondentfor samples.

**Result:** The analyze relationship between variabels using cartesian diagram and test of Kendall's tau. The results show that there is no significant correlation between the application of MPKP Modification with the level of the nurse's satisfaction. The Cartesian diagram showed prioritizes in the primary quadrant to accomplish.

**Suggestions:** Increase of the competitors will be steps of carrier, the motivation and awareness of nurse's profesion to make critical thinking in their services.
