

ABSTRACT

PT. Melania Indonesia, which is one of the major companies engaged in agriculture. PT. Melania Indonesia has several work units, one of which is a material work unit responsible for storing materials, pesticides and chemicals. In material warehouses that already have a good system there are still weaknesses, namely in the database there are several similar materials but have different items and names in the input database. To overcome these problems the first step needed is to do a problem analysis, which is expected to improve and provide solutions to the system.

Keywords: *PT. Melania Indonesia, warehouse material, database*
