

ABSTRAK

There is a fundamental problem faced by all web applicative that require data changes quickly and well .. By that time the effectiveness need owned by the system will be made man little by little began to develop a system or standard . Where the standard is called ajax .

The object of this study is the school where the school Xaverius, Xaverius a fundamental constraint. Where every turn of the page will be full pages and not effective . That way the system will have no effective data development and working hours be inefficient .

Then this information system application using ajax . With so expect the fundamental problems faced by the school can be above. By using standart ajax then the system will mempercepta performance data appearance and also do not use a lot of data . Only need to use or draw only necessary data .

With the ability to run a system that is hoped will be more dynamic due to fewer required data . With so user wait time for pages and pages already will reduced the better the service or convenience in the case of web users.

Kata Kunci :

Ajax, effective, Web
